By Tricia Goss Not just a family tree, a genogram can be used to illustrate many characteristics in and over three or more generations of a family. You can use shapes, lines, and text to show the location of each loved one in the family tree and identifying information, such as name and date of birth, as well as characteristics similarities. For example, you can highlight physical characteristics, occupation, family values or religious beliefs. Start PowerPoint and click the slide for which you want to create a gene chart. Select the Insert tab and click Shapes in the Illustrations group. Select a rectantann to represent the first man you want to add to the slide. Click the slide where you want to add the square. Select a circle from the Shapes gallery and click on the slide where you want to add a woman. Add each family member, using squares for males and circles for females, with each generation at its own level on the page. Click the shape that identifies you. Click the Format tab under Drawing Tools. Click Shape Outline, and click More Lines. Click the Compound type button and select a double line to show that the shape represents you. Add your name, date of birth and date of death, if any. Select the Insert tab and click Text Box in the Text group. Draw a text box under each shape and enter information. Place the letter X inside the shape of any dead family member. Select the Insert menu and click Shapes. Select By under Equation Shapes and draw X inside the desired shape. Display a marital relationship by drawing a down connector from each partner and meeting horizontally. Select the Insert menu and to Shapes. Click Elbow Connector in the Lines group. Click on the bottom of the of the first spouse. Draw lines down, across, and back up to connect with the second spouse. Draw vertical lines down from the horizontal line to connect with the child, with the largest child on the left and the youngest on the right. Indicates twins with a triangular line that connects the shape of children to the marital line. Connect the adopted children with a dotted line. Draw a smaller, solid-colored circle to show miscarriage. Create the key to the characteristics you want to describe on the gene chart. Draw a text box near an angle of the slide and list 3-5 characteristics. Add an icon to describe each icon. Select the Insert menu, click Icons, and select the icon you want to use. Add symbols to each person's shape to describe the corresponding characteristics. You inherit more genes from your family. As they grow, they are affected by the opinions and actions of family members. These ideas -- transmitted as genes -- are called memes. A career genogram is your family tree traced back to your grandparents that examines the career that each member pursues. Creating your career genogram can be personally rewarding and help you test the capacity you earn from your family to use in your own career search. Go to nurse content. Save. Life. Although our focus in hospitals tends to be on doctors in white coats, it is nurses who actually spend the most time with patients and who ensure they get the care they need. Nurses do everything from iv line changes and bedpans, to administering medications and watching out for patients' allergies. And often a attentive nurse can provide not only a little extra comfort to the painful patient, but also save lives from their close attention to detail. The importance of this life-changing career has driven College Choice to rank BSN online best! This CollegeChoice.net an ad-supported website. Partner programs are outstanding or reliable, and all school search, search, or match results are available to schools that compensate us. This compensation does not affect school rankings, resource guidelines or other editorially independent information published on this website. By the way, if you're looking for health care-related degreees other than a nursing degree, check out our page on the menu above dedicated to health care professions and professions. Nursing FAQ: What do nurses do? Nursing is an important component of health care. Nurses examine patients, record important signs and have a health history. Nurses administer treatments and medications prescribed by the doctor, as well as follow the drugs arranged by the hospital pharmacist. They support labor and childbirth, surgery and breastfeeding. In an emergency, a nurse performs to resuscitate their patients. These are just some of the tasks a nurse performs, but for many nurses, the job is much more than that. It's a calling and a way of life. Life does not save itself, and when a patient is flat or a child is writhing writhing someone needs to be there to help. These are roles that nurses fill, and from there they get a lot of motivation for the job. How much money can you earn if you study nursing? The nursing sector is expanding with high demand for patient care. BLS expects to grow rapidly by 19% by 2020. The U.S. desperately needs nursing professionals. However, that doesn't necessarily mean there are plenty of nursing opportunities where you live now. Demand is unusually distributed nationwide. Plans to relocate now after graduation, because shortages in some states will be acute by 2025. Becker's Hospital Review says Arizona will need more than 28,000 more nurses, and North Carolina and Colorado will each lack 13,000 nurses. Meanwhile, Ohio will have 75,000 more nurses than jobs. In terms of wages, California, Hawaii and Oregon have the best compensated registered nurses, with average salaries above \$90,000. And in terms of cost-wage balances, Nevada, Texas, and Arizona offer the best rates of average wages and living expenses. What types of nursing degree are available? As the demand for nurses increases, the demand for higher quality of care also increases. The Institute of Nursing's Future Medicine reported the initiative to an 80% BSN-educated nurse staff in hospitals by 2020. Hospitals currently prefer or require hiring new nurses who already have this degree, according to the AACN. To prepare you to provide more comprehensive care to patients and advance your career, an RN-to-BSN program is a profitable option. LPN completes a program one year followed by licensing. Community colleges and technical schools train and educate student nurses through practical learning. Students must pass the NCLEX-PN licensing exam to become LPNs. The Affiliate program lasts two or three years. They can then take the NCLEX-RN test to become a Registered Nurse. Some RNs who went to community college then enrolled in an RN to BSN (BS in Nursing) program so they could get their degree, improve their skills, and increase their payment prospects. Another common path is to take BSN from a four-year field and then take NCLEX-RN. While RN is a license, BSN is a degree. In addition to knowing that you are saving lives, a BSN also offers rich opportunities for promotion and high paying positions. Compared to a nursing degree or college degree in nursing, those with a bachelor's degree in nursing have a salary of up to about \$30,000 more, as Payscale reports. A third option to consider is an RN to BSN for MSN tracking or a dual BSN/MSN. MSN stands for Master of Science in Nursing. With an MSN degree, nurses can also get professional certificates in pediatrics, geriatrics or other units. According Nurse.org, there are several paths one can take to a satisfying career in this Note: American Association of Colleges want all tracking APRNs to get a Doctor of Nursing Practice (DNP), but there is no requirement. APRN, short for Advanced Practice Registered Nurse, needs a current nursing license, a graduate or graduate degree, and passing scores on the certification exam. Certification must occur before using the APRN specified. APRN re-confirms every two years by taking courses worth 40 CEUs (Unit of General Education). The PhD in Nursing Practice (DNP) shows expertise in the most difficult aspects of nursing. DNPs have the ability to apply their research to improve medical facilities and patient care. DNPs have an average annual salary of \$101,260. The anesthesiologist completes a year of work experience before admitting to an anesthesia program. The U.S. Midwifery Certification Board licenses certified midwives (CNMs). Nurse-Midwife re-certified in 5 years. CNM programs prefer to admit labor nurses and delivery. Practicing nurses hold an MSN or DNP, a state license, and certification. Certificates come from many specialized organizations such as the Council for Certification of Pediatric Nursing. APRNs with a doctor in nursing practice often carry out research. Nurses can also become nursing instructors, another profession with a shortage when aging faculty retire. They also go into pharmaceutical sales, medical writing, public policy advice, and medical supply sales. Other areas of nursing include reshuuting care (prisoners), telephone classification, forensic nursing, surgical nursing and dialysis. What specialty nursing is available? The first level of nursing belongs to Licensed Practice Nurses (LPNs). In some states, they use the title of Licensed Vocational Nurse (or LVN). LPNs and LVNs operate under the authority of a nurse or supervising physician. These nurses insert catheter, give the patient medication, and chart important signs of the patient. LPNs/LVNs tend to wound and feeding tubes, run intravenously and perform CPR in an emergency. The average salary for LPN and LVN is \$44,090. The Bureau of Labor Statistics (BLS) sees 117,300 new jobs for these nurses by 2024. This is 16% higher than the current number of employees. The second floor consists of Registered Nurses (RNs). RNs arrange patient care plans, operate medical equipment, and record a patient's medical history. They observe their patients and analyze diagnostic tests. RNs provide guidance on home care after discharge. They perform as a group with attending physicians and other medical staff. Sixty pathogens work in the hospital. BLS expects 439,300 new RN positions to open by 2024. That's a 16 percent increase. Their average salary is \$68,450. Anesthesiology nurses, nurse-midwives, and practicing nurses fall under the umbrella term 'Advanced Nurse Registration Practice' or APRNs. Certified Nurses-Midwives (CNMs) perform physical examinations, distribute fertility control and treatment for expecting mothers. They advise women on health, child care, and Practicing nurses (NPs) act as primary care providers, where doctors are in short supply. NPs allow tests and treatments. Anesthesiologists administer anesthesia for surgery, childbirth, and other procedures. APRNs have an average salary of \$107,460. There will be 53,400 new jobs by 2024, a 31% increase. RN-to-BSN The nursing sector is expanding with high-demand patient care. BLS expects to grow rapidly by 19% by 2020. As the demand for nurses increases, the demand for higher quality of care also increases. The Institute of Nursing's Future Medicine reported the initiative to an 80% BSN-educated nurse staff in hospitals by 2020. Hospitals currently prefer or require hiring new nurses who already have this degree, according to the AACN. To prepare you to provide more comprehensive care to patients and advance your career, an RN-to-BSN program is a profitable option. While RN is a license, BSN is a degree. In addition to knowing that you are saving lives, a BSN also offers rich opportunities for promotion and high paying positions. Compared to a nursing degree or college degree in nursing, those with a bachelor's degree in nursing have a salary of up to about \$30,000 more, as Payscale reports. The average salary for a nurse registered with BSN is \$76,705. Many RN-to-BSN programs are now available for nurses to enroll while working full-time. With the variety of existing RN-to-BSN programs, College Choice has compiled a ranking of the best online RN-to-BSN programs to increase flexibility for those of you who are unable to comm stop working to a physics college campus. Many colleges allow you to transfer DNA credits to count on your BSN. This way you can graduate faster, especially when taking accelerated courses. We have also ranked the most affordable online RN-to-BSN degree programs for the additional benefit of cutting costs. BSN When people think of hospitals and health care, the first image that comes to mind is usually a doctor in a white jacket, making decisions and saving lives. But people often forget that it is actually the nurse who provides the most direct care to the patient, in the emergency room or simply checks your annual health. They help carry out patient care, educate patients and their families about the state of health, and also provide emotional advice and support. The demanding and important nature of work is part of the reason nursing is a promising field of work. Hospitals are always expanding and looking for new, well-trained nurses, which is why the sector has 16% job growth (much faster than average) expected over the next decade. And the BLS estimates that the average registered nurse earns nearly \$70,000 per year. College Choice has come up with a diverse list of rankings, helping students view different edges of nursing education. Students looking for a more traditional experience should check out The Best Undergraduate Nursing Schools, while those looking for an online program should check out The Best Online Degrees for 2017. And finally students who focus more on affordability can consider the most affordable online BSN degree. MSN Nursing is a large and complex field, which means it requires both general professionals, as well as higher-trained professionals. Nurses pursuing their Master's degrees are eligible to become registered Advanced Practice Nurses, who provide more specialized care than regular nurses. These specialists perform a number of tasks and fill multiple reels, with example positions including nurse anesthesiologist, midwife nurse and nurse doctor. These nurses who sign up for this advanced practice have one of the most exciting job market prospects of any profession. The employment outlook over the next decade promises a crazy 31% growth in demand for workers. The sector also offers highly competitive salaries, as the Bureau of Labor Statistics estimates average salaries of more than \$100,000 per year for those in the sector. College Choice has published a list of the best Master of Nursing, which compiles our options for the best post-nursing programs in the country. College Choice also compiles a list of the best online MSN Programs, for students looking for a less traditional after-college experience. And finally, for students considering affordability is one of their most important factors having the most affordable Online Nursing Master. As health care costs increase and health care needs expand, nurse athletes will continue to grow significantly. The shortage of doctors is an opportunity for registered advanced practice nurses (APRNs), advanced trained nurse classes, and can prescribe medications and do other procedures traditionally reserved for doctors. These nurses need an MSN or even sometimes a DNP (Doctor in Nursing Practice). Nurse athletes, along with nurse anesthesiologists and nurse midwives (other aprns), are well paid. According to the BLS, these nurses earn an average salary of \$107,460 per year. Over the next year, positions in the sector are expected to grow by a staggering 31%, which BLS considers to be much faster than average. Of the three APRNs mentioned here, Nurse Anesthesiologists have the highest average salary: \$160,270 annually. Interested in switching to advanced practical nursing? We have a few charts to help guide you. Our list of best nurse practice programs will give you a survey on the field. If you are interested in the flexibility of an online degree, then check out our ranking of the best online nurse vet programs. Both of these rankings are divided into MSN and DNP programs that both prepare you for advanced practice. And if you're concerned about prices, we also have a list the most affordable online nurse's degree. DNP nurse athletes are registered nurses with advanced degree. While this degree can take up to 5 years to complete, it's worth it for enthusiasts helping others. Career opportunities are often NP Family, Adult-Gerontology (Acute or Primary Care) NP, NP Mental Health-Mental Health, Pediatrics (Acute Care or Primary) NP, and NP Women's Health. From nursing home to hospital, you will have many options after completing this prestigious degree. If stable employment is important to you, a career in nursing is perfect. In fact, the Bureau of Labor Statistics predicts 31% job growth in this industry by 2026! Practicing nurses can expect not only stable employment, but the potential for a fairly impressive salary. BLS sets the average 2016 salary for nurse athletes at just over \$105,000 per year. Not too bad! For those looking for a more flexible or affordable program, check out our ranking of the best online DNP Degree. Our online list includes the likes of Duke University, Georgetown University, and the University of South Carolina. College Choice has also published a ranking of best practice nurse certificates. For those looking for a more flexible or affordable program, check out our ranking of the best online DNP Degree. Our online list includes the likes of Duke University, Georgetown University, and the University of South Carolina. Carolina.
